

Climate Policy

Climate change is one of the most challenging and significant issues facing the world today, and at Celanese, we are committed to doing our part to make sustainable progress toward addressing the problem. We support multilateral approaches, such as the Paris Agreement, that promote ambitious efforts to address climate change holistically.

We recognize that the nature of our operations is energy and fossil fuel intensive, and we are investing in projects to increase energy efficiency, improve reliability, recover and reuse waste heat, increase our purchase of renewable energy and more sustainable raw materials.

As Celanese continues its ESG journey, we are committed to establishing a robust climate program that includes publicly reporting a baseline and metrics. Going forward, we commit to:

- identify and implement sustainable and innovative solutions to reduce our carbon impact;
- develop products that reduce carbon usage; and
- work collaboratively with suppliers, government, and other key stakeholders to make meaningful progress.

We are confident that we will successfully leverage our people and their passion for chemistry and innovation to improve the world.
